ROSES AND DAHLIAS

"The World's Finest"

W. E. SHERBROOKE, Specialist CORNELIUS, ORE.

A garden is a lovesome thing, God wot!

Rose plot,
Fringed pool,
Ferned grot—
The veriest school

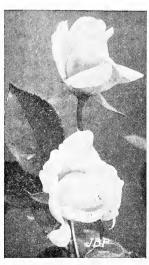

Of peace; and yet the fool
Contends that God is not—

Not God! in gardens; when the eve is cool?

Nay, but I have a sign;

'Tis very sure God walks in mine.

-THOMAS EDWARD BROWN

OPHELIA

FOREWORD.

Dear Friends and Customers:-

Greetings: To your loyalty and continued patronage is due the prosperity of this business which is indicated in the improvement shown from year to year in this, my silent salesman.

In presenting to you my sixth annual, I wish to thank you for your kind recommendations to friends and neighbors. In so doing, you are helping them to find the path to successful rose and dahlia culture and helping me to serve you better in the future.

I appreciate your courtesies, I assure you.

This season I have cut out the two or three pages of "Testimonials" usually found in this booklet, although I have received more than ever before in the last year.

My reliability and integrity are now so well established that old customers will not miss these and prospective customers will realize that success in business is due to the operation of some vital principle. In this business it is largely a matter of sentiment; a feeling of confidence, fellowship and good will, between buyer and seller—something more than mere value for value received.

And so I bespeak a cordial reception for this little book.

If not requiring any roses or dahlias this season, won't you please pass it along to someone interested in growing good roses and dahlias?

Or, better still, send me their names and addresses and I will be glad to send them a copy.

Additional copies of the beautiful color-photograph on the front cover may be had for the asking and postage.

To merit your continued patronage and favors, will be my constant endeavor. Some day, by sheer force of merit, my stock will find a place in most Pacific Coast gardens. Why not now? Let's get acquainted.

Yours for better flowers, and more of them,

W. E. SHERBROOKE,

Rose and Dahlia Specialist.

Same and S

- STOCK—Own root stock is furnished in varieties that succeed best on their own root. Some of the very finest however, make a very poor showing unless budded low on a strong root stock. It takes a year longer and is therefore more expensive to raise budded plants and this method is not pursued without a good reason. When budded plants are set with the bud (where the cultivated portion joins the foster plant) two inches below the surface, there will seldom be any wild suckers appear and if they do they are easily detected and readily removed. The world's best growers,—amateur and professional,—prefer budded stock because of the better results obtained. All propagating is done in the open with wood from field-grown plants, an immense advantage over hot-house stuff. I have no glass.
- GRADES—Am quoting only first grade prices. These are for strong, husky, field-grown plants, usually two years old or better. All plants do not grow a uniform size and I have a few extra large three and four year old plants which will be furnished at a 25 per cent advance on prices quoted. A lighter grade can be had at a similar reduction. No small microscopic size plants from thumb pots, grown. Remember that some varieties are less vigorous than others and size does not govern the price. For instance, a plant of Caroline Testout at 25c, may be three times as large as some varieties listed at \$1.00.
- TERMS—Cash with order. Prices are based on a strict observance of this rule. No C. O. D. orders booked.
- FREE CARRIAGE—The prices quoted include free delivery to your door, by parcel post, except very large orders, or standard (tree) roses, these will be sent by express as usual, charges prepaid. It will therefore, be no more expenive to you than if my nursery were located in your neighborhood. Liberal premium discounts on all club orders. Get up a club order in your circle of friends and neighbors and get your plants free.
- SUBSTITUTING—Please name a few extra varieties as second choice. In spite of the large quantities usually provided, some sorts are sold out early. Supplementary list will in no case be used except when first choice is exhausted. To avoid delay and extra correspondence, I will, unless otherwise instructed, send similar or better sorts of the newer varieties.
- PACKING—All packing will be adequately and carefully done. According to the importance of the order, I invariably do myself the pleasure of adding a choice plant or so, gratis.
- ORDER EARLY—Stock is set aside to fill early orders and best plants selected first.
- PRICES—In comparing prices with other dealers, it should be remembered that there is scarcely an article of merchandise in which the quality may differ more than in plants. My prices are as low as sturdy, true-

Order early as stock is limited,

to-name, field-grown roses can be sold for, and it is manifestly unfair to compare them with the cheap rooted slips from thumb pots (hot house grown) offered by several eastern florists, as they often take two or more years to make the desired showing, if indeed they ever produce a prize bloom.

At the same time, it is extravagance to pay more for plants alleged to surpass mine in quality. Better stock is not to be found.

In building up a flock of poultry for heavy laying, it would be absurd to take the scrubs some fellow offers simply because they are cheaper. This is not economy.

ROSE SPECIALIST—Instead of growing and knowing a litle about all general nursery stock, I am making a special study of rose and dahlia growing and have determined to specialize in this particular branch of the nursery business, believing that the expert amateur would have more regard and confidence in such a source of supply.

My order book proves that this is being realized, for it now reveals extensive orders from many of the most successful prize winners in Oregon and Washington.

BARGAIN IN UN-NAMED ROSES—In the nursery are several dozens of large two and three year old rose bushes from which the labels have become accidentally lost and so I am unable to offer them in proper classes. Here is a chance to get some good roses (all are choice varieties) at a low price, if not particular about names.

While they last 15c each. \$1.60 per dozen; carriage prepaid.

GUARANTEE—The greatest care is exercised in keeping stocks true to name and only the most reliable sources depended upon for supplies. In spite of this, errors will sometimes occur, for it is said that, "A man that never makes a mistake, never makes anything else."

I hold myself in readiness to replace, on reasonable proof, any plants that prove to be untrue to label.

Success with rose plants, is largely dependent on after care and treatment. Failure may be due to excessive cold, heat, exposure, drouth conditions of soil, carelessness or neglect, all of which are beyond the control of the nurseryman, and it is not possible to guarantee that all will grow and flourish. When plants are received in good condition, accepted and planted, my responsibility ceases and yours begins.

However any just complaint will be carefully considered.

HINTS ON CULTIVATION OF ROSES.

SOIL...Any garden soil that will produce vegetables, will also produce good roses, with liberal cultivation and stable manure or ground bone, (coarse and fine') well incorporated with the soil. The Teas and most of

Buy your roses from a specialist.

the Hybrid Teas will do well in sandy loam, but a little clay will greatly improve the theHybrid Perpetuals. A dressing of air slacked lime and land plaster, a handful to each plant, will sweeten the soil and correct acidity in old, heavily manured gardens.

LOCATION. Dean Hole says: "The rose garden must not be in an exposed location. It must have shelter but not shade. No boughs may darken, no drip may saturate, no roots may rob the rose."

UNPACKING. Take the bundle to a cool shady place and carefully rnpack. Never under any circumstances allow the roots to become exposed to drying winds or sunshine, always protecting them every minute they are out of the ground.

If the bundle has been delayed and plants seem shriveled, soak them over night in tepid water. In extreme cases, open a trench and lay the plants in full length, covering entirely with earth six or eight inches thick, then water copiously and allow to remain three or four days. When lifted the wood will generally be found quite fresh and the leaf buds plumped out again.

PLANTING AND CULTIVATING Planting should be done in the fall or spring, exept that east of the Cascades, Tea roses should be planted in spring. Dig deeply and if possible prepare the beds several weeks in advance. In low situations, artificial drainage must be provided. Large rocks, broken crocks or tiling, placed in the bottom of the trench, will be ample as a rule. Inverted sod placed over this and tramped before soil is returned, prevents leaching Turn soil as frequently as possible and allow to settle before receiving the plants. Spread the roots out in natural position and do not allow them to cross without putting some soil between. Never let the rank fertilizer come in direct contact with the roots or your plant will be sickly or die. Get the roots about three inches below the surface.

When planted late in the spring, extra care is necessary and do not allow them to become dry at the root. Shading will be appreciated until root action begins. Frequent hoeing is better than continual watering in dry seasons and much cleaner blooms may be had.

MILDEW AND APHIDES are the worst enemies of the rose. Make a solution of one ounce potassium sulphide (Liver of Sulphur) to three gallons of water. Dissolve the lump of sulphur in water and add a lump of Lifebuoy soap the size of a walnut. Spray plant early in the day and spray the ground at base of the plant. One application will combat both mildew and aphids, thereby saving time and trouble. This should be repeated the second day. In cities, aphides may be kept in check by turning a strong spray from the garden hose directly on the plants. This will dislodge them and wash the dust and soot from the foliage. This should be done early in the morning, never at night. You will sacrifice some blossoms, but the plant will thrive better with clean foliage to breathe through.

"Defoliating Black Spot" is another troublesome disease often causing the plants to become denuded of foliage, which of course checks the growth and development of the plant, weakening the constitution. Treat with same solution as for mildew, both are fungus diseases. It should be understood however that no power on earth can restore the foliage to its original freshness, we can only cure or check the disease, the same as smallpox, we can never remove the marks left by same, so do not complain that the spraying has done no good; wait for new growth and repeat the spraying as the trouble again appears.

PRUNING AND DISBUDDING are often neglected. Much better blooms may be had if old wood is removed and only the strongest, ripest, newest canes left. These should be shortened in the fall to prevent whipping in the wind. In March or early April prunning should be attended to. Cut to a dormant leaf eye pointing outwards, always. The center of plant must be kept open to permit of free circulation of air, or mildew will result. Climbers should not be shortened except tips of newest growths, but all canes three or more years old should be removed to encourage new breaks from the base. On dwarf plants only one specimen bloom will be produced on each shoot, the other buds should be removed as early as possible, unless you are satisfied with a lot of small roses of poor quality.

After the first profuse period of bloom, the plants require a little rest. When the second growth of the summer commences, prune away some of the older superfluous wood that appears exhausted and new growth will develop with more good quality flowers.

FERTILIZERS Animal manure is the best, that from a cow stable preferred. Sheep manure and cleanings from the poultry house, are very highly concentrated and while they are excellent fertilizers, they must be used sparingly, never near the roots. Bone meal, blood and bone and other artificial stuff may be used to supplement animal manure or when same is not available. Except when preparing new beds, I prefer to apply as a top dressing in March. The spring rains may be depended upon to carry the nutrition down to the roots at the season they are most active and can best appropriate same. When mixed with the soil, the manure should be well rotted, but for top dressing, green or fresh stuff is better.

WINTER PROTECTION is not much needed west of the Cascades, but it is advisable to draw the earth up to stem of plant, like hilling potatoes or celery.

TIME OF SHIPPING. Plants should only be moved when in a dormant condition; usually from about November 15th to March 15th. Frost is required to check the growth, loosen the leaves and harden up the wood. Some seasons frosts are late and plants too green and soft to move before December 1st. By this date enough orders have accumulated to occupy the shipping department for many days. Successful plantings have been made as late as April 30th. This is too late to risk success as plants have started growth and may fail. Importations seldom arrive before New Year.

Pleased customers boost for Sherbrooke's Roses.

VARIETIES.

"T". Tea variety, perpetual bloomers, delicate colors but not entirely hardy.

"H. T." Hybrid Tea, a cross between the Teas and the H. P.'s by far the best class, embracing now the finest colors and qualities for general cultivation.

"H. P." Hybrid Perpetuals, not correctly named, as they are not all perpetual flowering. They have the best of the dark red roses in their class and are quite hardy.

"Wich." Wichuriana, hardy climbing or trailing roses, flowering in clusters of small flowers, very effective for pillars and arches, having beautiful glossy foliage.

"Nois." Noisette, climbers of great beauty, larger and fuller than Wichurianas.

"Hy. Rug." Hybrid Rugosas, a cross between Teas, Hybrid Teas and Rugosas. Extra vigorous and hardy; also perpetual flowering.

ALPHABETICAL LIST.

PR	ICE
A. Hill Gray, T.: Deep lemon yellow, large, full, fine form \$.40
Alberic Barbier, Wich.: Yellow shading to white, beautiful foliage	.30
American Pillar, Wich.: Large clusters of bright pink, grand fol-	
iage. A decorative rose of great beauty and charm	.30

perfect shape, time for exhibition and cutting	.00

TREE ROSES.

A large stock of standards, or tree roses, of special reliable sorts, including several of the newer varieties, will be found here at prices to correspond with size of stem, head and variety. These range from \$1.00 to \$5.00 for stems from one foot to nine feet in height. Most of the older varieties can be supplied at \$1.00 each.

VARIETIES NOT LISTED: Before placing order elsewhere, kindly give me the opportunity of furnishing or obtaining any variety not listed herein. I have about three hundred other varieties in my nursery, some undergoing trial, others seldom called for and may have just what you want in true to name sturdy plants.

Specializing in Roses and Dahlias.

SHERBROOKE'S MARVELOUS DAHLIAS.

No flower has received more attention from hybridists and specialists in the last ten years, than the Dahlia, and truly wonderful advances in color, size, form and habit have been achieved.

It is not practicable to try out all the novelities, many of which are discarded after the second or third season, having failed to measure up to our present high standard, and so I do not claim to have the largest list of varieties, that is not my purpose, but I do claim to have one of the most up to date collections of high class dahlias in America, and am constantly selecting new sorts and eliminating old, in order to keep down the ever increasing list.

When unfamiliar with varieties and selection is left to me, I will give remarkable value, allowing 30 per cent discount from catalogue prices.

Prices will compare favorably with those of any other reputable grower. I am not running a "Cheap place" and do not covet that reputation, but will meet any reasonable competition.

Special prices will be quoted on large lists and your valued patronage solicited.

Prices will include free delivery.

You will be pleased with what I send you. A trial order is earnestly solicited.

HINTS ON CULTIVATION.

Dahlias are easily grown, requiring no special soil, treatment or skill to bring them to perfection.

They are remarkably free from disease and have few special enemies. They succeed in partial shade.

The Dahlia is really an autumn flower and too early planting is often the cause of much disappointment.

When planted before the middle of May, they commence flowering during the hot dry months and seldom present a representative bloom, becoming exhausted before the cool damp weather in which they revel.

Dig deeply, incorporating a shovelful of well rotted stable manure, or ground blood and bone, if manure is not available, in each hill, which should be three to four feet apart.

Drive a stout stake in each hole for the support of the plant. Now lay the tuber down flat, with the eye to the stake, about four inches deep and cover one inch with pulverized soil, gradually filling to level as growth progresses.

Remember that a small tuber with a good live eye, is as good or better than a very large one, and will give greater increase in new tubers for digging. When the plants are about six inches high, they should be tied to the stake, the ties to be adjusted as plants develop.

Too much water and fertilizer during the growing season will cause the growth to become rank, so do not treat liberally until flowering time arrives.

When frozen down in the autumn, cut stocks off at the ground and dig carefully so as not to break the neck of the tuber, for the eyes for next season's growth are only to be found where the tuber joins the stock. Store same as potatoes where they will not freeze, shrivel or rot, turning the clump upside down to drain out any superfluous sap which may sour and start decay.

LIST OF VARIETIES.

CACTUS.

DAHLIAS NOT LISTED.

I have about 200 other varieties on hand and may be able to supply just what you want at an attractive price, guaranteed true-to-name. Write me about them.

Will allow 30 per cent discount if selection is left to me.

EARLY FLOWERING CHRYSANTHEMUMS.

I have tried out most of the early flowering sorts for this climate and can supply an ideal collection, embracing most of the colors and types, my selection, 12 plants for \$2.00 ready in May. You will be delighted with this collection.

Dahlia Discounts

On account of my location I am unable to get my flowers before the public and benefit by this form of advertising, to the same extent as Portland growers. Working on cheaper land, my expense of production is not as great, and so I am in a position to offer the following discounts, ON DAHLIA ORDERS ONLY, which should stimulate the demand and warrant my getting my share of the business.

Any person sending me \$2.00 for dahlias may select bulbs to the value of \$2.35.

Any person sending me \$3.00 for dahlias may select bulbs to the value of \$3.60.

Any person sending me \$4.00 for dahlias may select bulbs to the value of \$4.85.

Any person sending me \$5.00 for dahlias may select bulbs to the value of \$6.50,

(This does not apply to the cheap collections.)
